

Music Education for Homeschoolers

Music can be an important component of a well-rounded homeschool. It surrounds us in all we do and helps define a time and culture. What is the benefit of music? Maybe you have heard of the "Mozart Effect", based on a 1997 book by Don Campbell and founded on the 1991 research of French researcher Dr. Alfred Tomatis. The Mozart Effect claims that listening to classical music, especially Mozart, can further develop the spatial-temporal functioning of the brain, lead to better math and science learning, and create smarter children.

The Mozart Effect have not been validated by other researchers. Many have proven that the Mozart Effect is temporary at best. So, in short, the jury is still out on this.

However, learning about music or how to play an instrument is always beneficial to anyone. Music involves both left and right-brain functioning. Music inspires creativity and passion. Learning to play an instrument or sing is a life-long skill that can bring both pleasure and practical income.

How can we pursue music in homeschool?

Piano Passion provides a well-rounded educational opportunity that many piano studios don't. At Piano Passion students learn:

- **Music History**
- **Music Theory**
- **Group Lessons are also available which provide homeschoolers with classroom interaction amongst their peers**
- **Study Classical Piano and learn technique**
- **Students participate in two formal recitals a year , as well as several informal recitals**
- **We strive to provide volunteer opportunities on an annual basis**

Piano Passion is centrally located and offers very reasonable rates, please call today to set up an Interview and get started with your child's Music Education.

Family Discounts are available as well
